ABOUT INTELLECTUAL PROPERTY ESCROW

VirtuCrypt Elements Intellectual Property (IP) Escrow is a disaster mitigation service to help companies fulfill obligations to clients. As a neutral third party, it stores an authenticated copy of IP such as software source code, which is made available upon the occurrence of contractually defined trigger events.

VirtuCrypt Elements protects the intellectual property rights of your product by fulfilling IP escrow requirements, preventing legal disputes and enabling your customers to incorporate your technology in mission-critical areas of their business.

KEY FEATURES

- **SECURE DATA CENTERS**
  Our manned facilities are SSAE 16 (SOC 1, 2, and 3), PCI, and TIA-942 Tier 4 compliant
- **CUSTOMIZABLE SOLUTIONS**
  Multi-party agreements and unique requirements are fit exactly to your needs
- **AROUND-THE-CLOCK SUPPORT**
  Personalized assistance provided 24x7x365

The VirtuCrypt Elements IP Escrow service is designed to provide the greatest security possible for your proprietary data. All information provided to VirtuCrypt will be verified using hash values, encrypted with Futurex’s industry leading cryptographic technology, and stored within our secure data centers. VirtuCrypt provides optional verification capabilities including archive changed files and performing full usability testing.

VirtuCrypt accommodates electronic delivery of escrow updates. VirtuCrypt Elements IP Escrow can be fully managed through the VirtuCrypt Intelligence Portal (VIP) Dashboard. Track, manage, and scale your escrow environment, all from one centralized location.
THE VIRTUCRYPT INTELLIGENCE PORTAL (VIP)

The VIP Dashboard provides an intuitive way to securely control and monitor your entire cryptographic environment from one location. Users can configure their VIP Dashboard to include only the information that is most useful to them and define custom alerts through VirtuCrypt's active environment monitoring utility.

Organizations also have the opportunity to rebrand the VirtuCrypt Dashboard so that it can be offered to customers with the cohesive look and feel they’ve worked hard to build. This includes adjusting color schemes, logos, and imagery to match the company’s brand and create instant product recognition for customer base.

VIRTUCRYPT DATA CENTER SPECIFICATIONS

The multiple geographically separate data centers selected by VirtuCrypt showcase its high regard for uncompromising security. Not only are these data centers outfitted with state-of-the-art technology, but they enforce physical and logical security measures, such as biometric access controls and dual authentication, that ensure the integrity of your most sensitive data.
